

Pollution Dilution

To dilute means to reduce. That was the aim of the Emission Alert Campaign launched by Transport Malta in August 2005. Public awareness was used as the main source for reporting harmful vehicle emissions, which helped in reducing drastically vehicle emissions. Although, things took a downturn after 2008, this reporting scheme need to be introduced again. This will help citizens play an active role in decreasing air pollution. With a comprehensive pollution prevention program, one would be able to help build a sustainable city.
